

AES Clean Technology Value Proposition 1110

- Product: Cleanroom with standardized modules
 - Value Proposition: Facilflex modular room modules eliminates special engineering and minimizes delivery time
 - Product Quality: Modules tailored to protecting product
 - Capacity: additional modules can be quickly added
 - Timing: Shortest date to start up
- 

AES Faciliflex

- Cleanroom design becomes as simple as mixing and matching separate pre-designed processing room configurations to create the most efficient, custom facility—with each processing room module designed to connect together and create a fully integrated, climate-controlled cleanroom. Faciliflex Module reduces client risks to production, design-build timelines, and escalating costs.
- Each Faciliflex Module comes with a standardized cleanroom “baseblock,” with fully integrated processing modules that can be rearranged and reconfigured to meet the unique needs of every life sciences client. With Faciliflex Module, clients can pick-and-choose multiple units that meet their specific process requirements, from cell culture suites to packaging; from pre-designed units to specialized suites.
