

Global Orchard

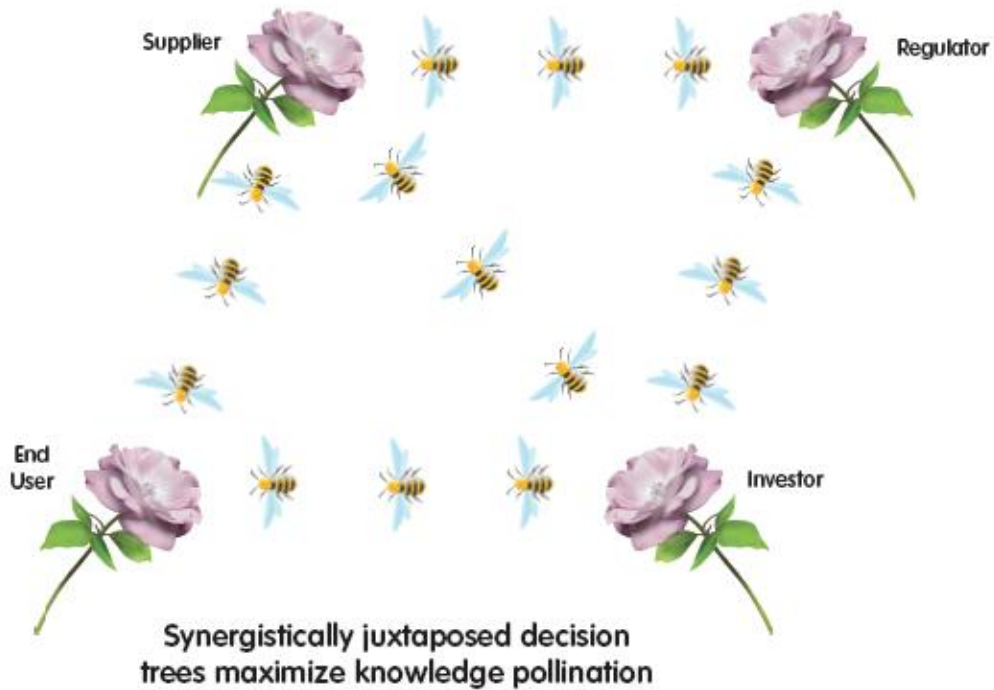

- McIlvaine presently publishes the comprehensive Power Plant Air Quality Decisions with multiple decision tree systems.
- This is the start of a Global Orchard of synergistically juxtaposed and Fruitful Decision Trees
- Pollination from one tree to another will greatly enhance the productivity of each tree
- The fertilizer from the Universal Product Identification System will facilitate this pollination.

Adopting a New System

- The internet and Google have transformed knowledge gathering. Now we need some organization.
- Decision making is classification. The Universal Product Identification System is the fertilizer which makes the pollination fruitful.
- The world needs the 4A's: Alerts, Answers, Analysis and Advancement delivered by millions of decision systems. It has to start somewhere. Why not with pumps for power plants?
